### ABSTRACT

time, thinking are the main dimentions . thinking act by our five sense organs, eye,ear, nose, tongue, skin. when  $dT/dt= 1$  then the person feels the world properly with time . when  $>1$  then he is thinking higher. when  $<1$  he thinks slowly. in case of different person the capital T (thinking) and small t changing rate is different.

There are only two dimensions in real life ,which are time (t) and thinking(T). When  $dT/dt>1$  then it happens for fast thinker, $<1$  for less thinker , $=1$ for general thinkers. Some time the value becomes  $\gg 1$  or  $\ll 1$ . This is the main thing of my view. Thinking depends on five senses.
